Updates to Evaluation and Management (E/M) Documentation and Auditing Requirements

Effective: See policy update

We are updating Evaluation and Management (E/M) guidelines to align with our contractual obligation to enrollees. Key changes include replacing overall organ system counts with a detailed bulleted-element counting system for physical exams, requiring a Chief Complaint (CC) at all history levels, and establishing specific criteria for Comprehensive, Detailed, and specialty exams.

To comply, providers must:

- Align examinations with precise bullet-counting structures and shaded/unshaded box criteria.
- Ensure a CC is indicated at all history levels.
- Document the date, location, and updates when referencing historical ROS or PFSH.
- Elaborate on abnormal findings in symptomatic areas, reviews of old records, and family histories.
- Meet specific criteria for Comprehensive Musculoskeletal (all 4 elements across 4 areas) and Skin (all 4 areas) exams.

Failure to comply will result in claims denials (High Risk):

- Failing to document all shaded-border and at least one unshaded-border elements in Comprehensive exams.
- Documenting <12 elements for Detailed Neurological/Respiratory exams or <9 for Detailed Psychiatric exams.
- Omitting elaboration on old records, family history, or "abnormal" symptomatic findings.
- Failing to individually document 10 systems for a complete ROS without a "negative" notation.
- [AI Recommendation] Update your electronic health record templates immediately to prompt for the mandatory Chief Complaint at all history levels and enforce bulleted-element counting for Detailed and Comprehensive exams.

(Medium Risk: Reviews of historical ROS/PFSH omitting date, location, or updates will fail history requirements.)
